

Mountain Bike World Championships

After three unofficial World Championships, the UCI organized the first official World Championship with the disciplines cross country and downhill in 1990.

Cross Country Olympic (XCO) format races are held over undulating circuits (with technical descents, forest roads, rocky paths, and obstacles) of 4 to 6 km, which riders must complete several times. The Elite racing times, for men and women, vary from 1h 30 minutes to 1h 45 minutes. An attractive course design must ideally use the venue in a form of a clover leaf.

Downhill International (DHI) is a race against the clock in which the rider negotiates a succession of fast and technical passages. The participant must demonstrate courage as well as sharp technical and piloting skills to affront tree roots, banked sections, bumps, jumps and other natural obstacles along the way.

Dual slalom (DL) involved knock-out heats with two riders racing on parallel course. It was the forerunner of **Four Cross (4X)** in which four riders race against each other on a single course.

As with 4X, after a qualifying round, the **Cross Country Eliminator (XCE)** sees four riders compete against each other in each heat. The two fastest go on to the next round. The short eliminator courses require speed, technical skill and strength.

An Electric Mountain Bike, used for **Electric MTB Cross Country (EXC)**, is a bike operated with two energy sources, human pedal power and an electric engine, which only provides assistance when the rider is pedaling. E-Mountain bike events must be organized in accordance with the following bike standards: 1) Engine with a maximum continuous rated power of 250 watts, 2) Engine assistance up to 25 km/h, 3) Pedaling assistance only, although a start-up assistance not exceeding 6 km/h without pedaling is allowed.
